

Eurecom WebTech -project
presentation

Eetu Korhonen,
<http://eeeko.iki.fi/>

What is it?

Web-accelerator, content-filter, bandwidth-conservation...

Two components

The compressing-proxy

- Python script
- Server running a detector & rescaler for images
- Running a control-service usable by the browser plugin

```
gayBot-9600:compressproxy eekoo$ ./compressproxy.py
DeprecationWarning: the md5 module is deprecated; use hashlib instead
import itertools, md5

Usage: ./compressproxy.py [proxyport] [controlport]
Defaults to 8080 and 8081
Example: ./compressproxy.py 8888 8889

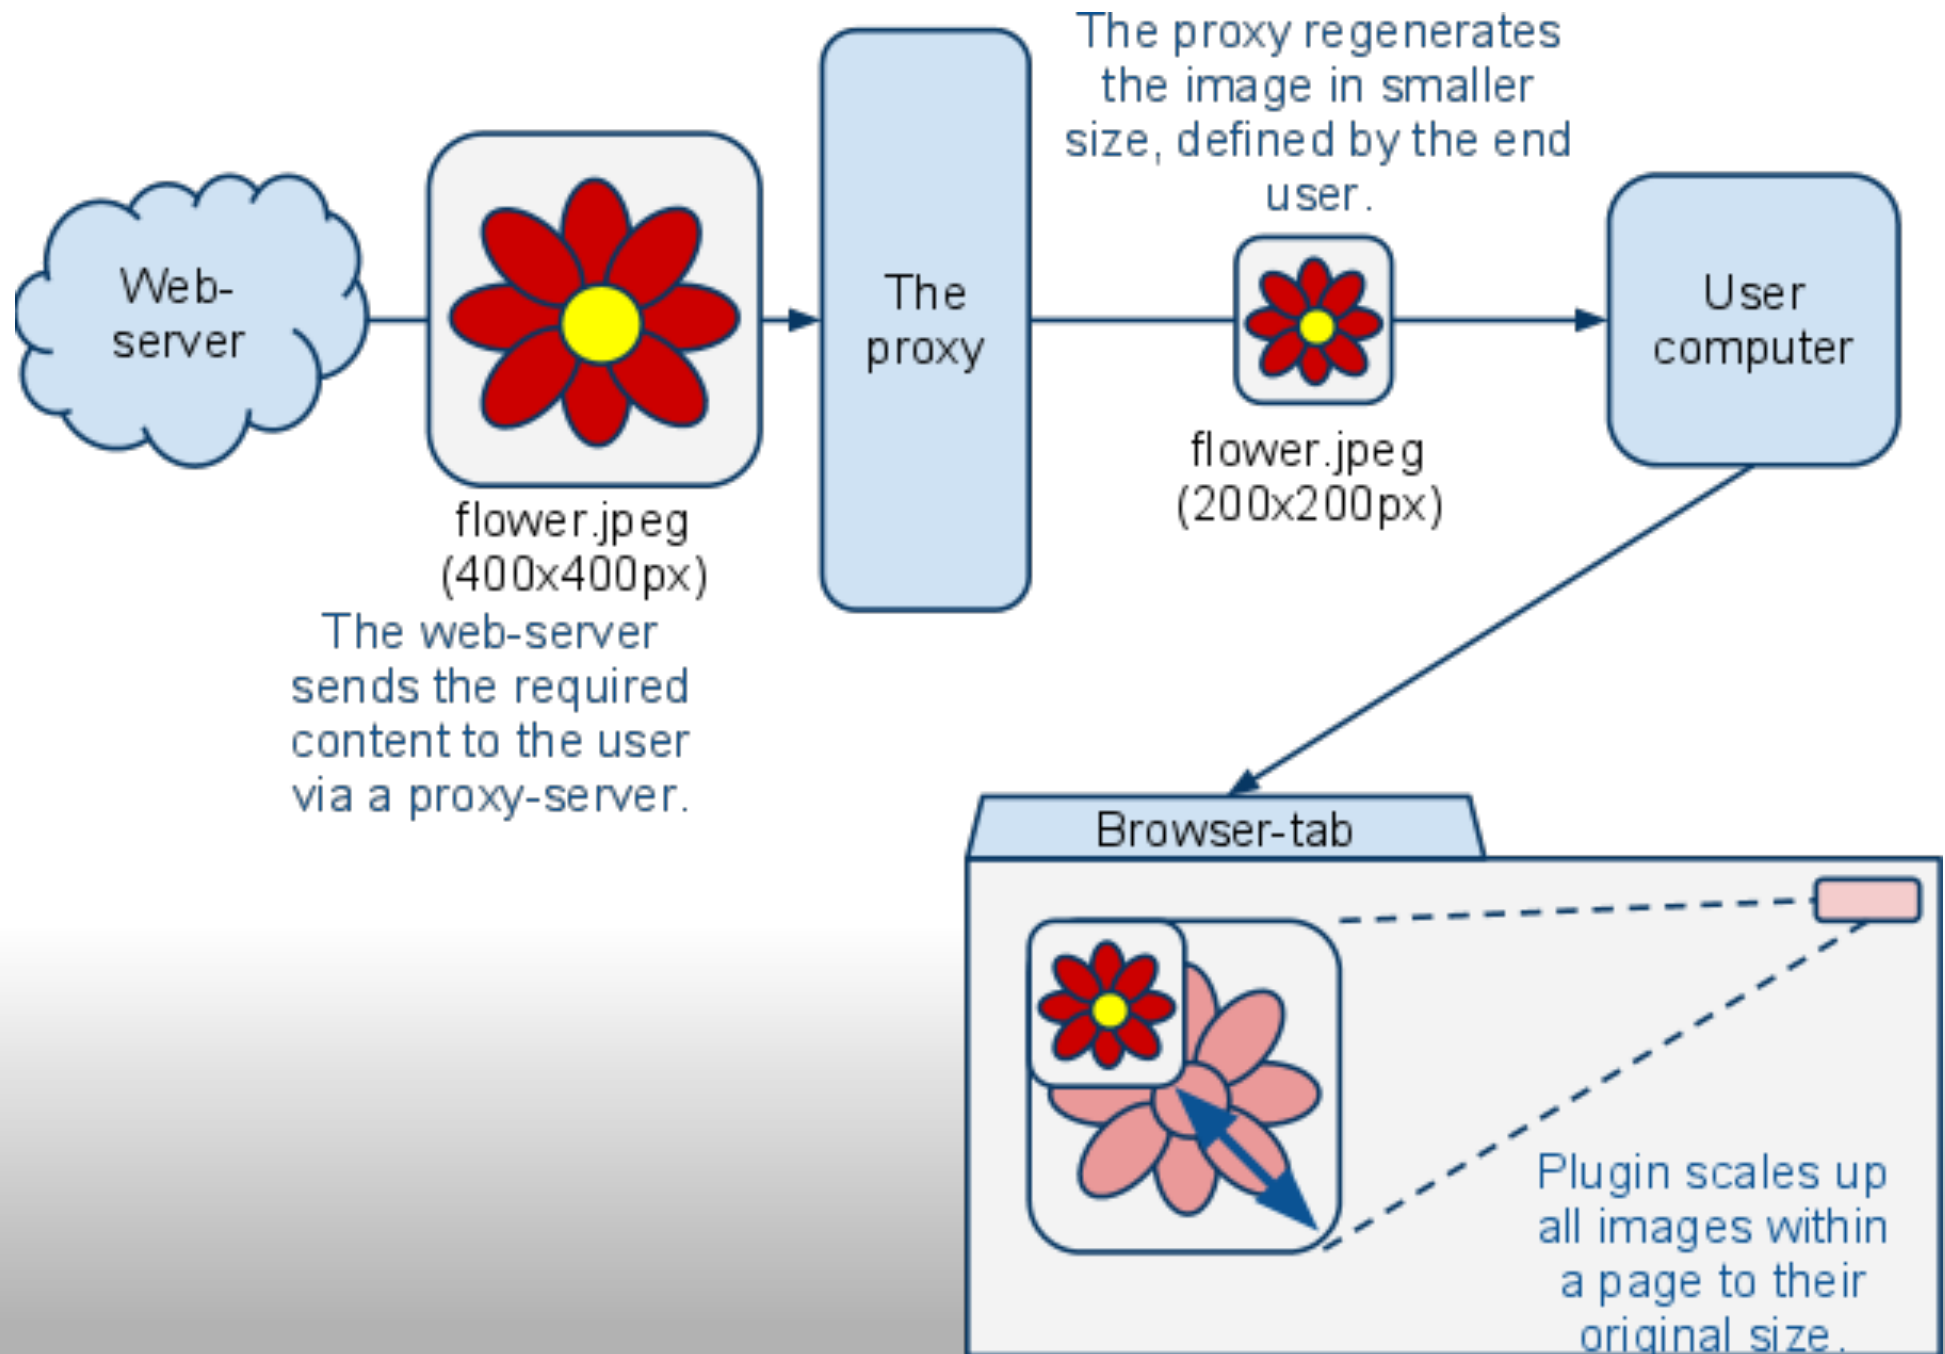

Starting proxy-service at 8080
Starting control-service at 8081
```

The browser-plugin

- Google-chrome extension
- Controls the behaviour of the proxy
- Post-processes the images sent to user by the proxy

How does it work?

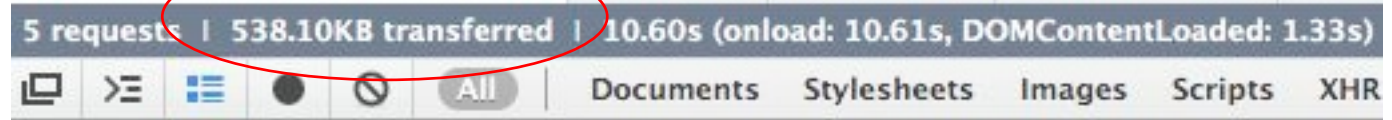

How does it look?

<http://eeko.iki.fi/~eeko/imgproxy/>

- The sample page takes around 538 KB to download

ImgCompressor!

5 requests | 538.10KB transferred | 10.60s (onload: 10.61s, DOMContentLoaded: 1.33s)

Icons: [Copy] [Expand] [List] [Close] [Refresh] [All] [Documents] [Stylesheets] [Images] [Scripts] [XHR]

A sample page for ImgCompressor plugin+proxy

Lorem ipsum dolor sit amet, consectetur adipisicing elit, sed do eiusmod tempor incididunt ut labore et dolore enim ad minim veniam, quis nostrud exercitation ullamco laboris nisi ut aliquip ex ea commodo consequat. Dolor in reprehenderit in voluptate velit esse cillum dolore eu fugiat nulla pariatur. Excepteur sint occaecat cupidatat non proident, sunt in culpa qui officia deserunt mollit anim id est laborum.

How does it look?

<http://eeko.iiki.fi/~eeko/imgproxy/>

- With **25%** "compression", the transfer-amount has reduced to nearly **1/10th** of original while retaining fair usability

ImgCompressor!

The Demo

Other uses

In a low-fi browser where the bandwidth and computing resources are an issue.

- Developing countries, dumbphones
- Opera Mini uses similar content-preprocessing technology

Other uses

Using within a reverse-proxy to tailor content for different clients in real-time image-rich applications

- Such as <http://www.canv.as/>
- Reduce the load and complexity of the core-service
- The content-script to post-process images can be within the site instead of browser

Thank you
